Education

Rutgers University

Bachelor of Science in Computer Science and Cognitive Science (GPA: 3.67 / 4.00)

May 2025

New Brunswick, NJ

Experience

PNC Bank

Jul 2026 – Present

Software Engineer, Data Streaming Platform

Dallas, TX

- Reduced CPU throttling across multiple production Kafka Streams workloads, including one application that went from 1.7 throttled cores at peak to zero while cutting processing time by 1.5 hours through Kubernetes resource and stream-thread tuning.
- Built a Python application to extract month-long, minute-level Dynatrace CPU telemetry across 500 streaming applications into Excel for team review; worked with the team to select right-sizing candidates, and built a script to automatically patch OpenShift deployment limits to the greater of a safety floor or observed peak usage — validated in QA, reducing CPU allocation from 96% to 86%.
- Designed Kafka topic architecture across raw, ingested, repartition, and changelog streams for an event-driven payment notification system enabling eligible customers to access direct deposits up to 2 days early.
- Extended an observability dashboard with Dynatrace dashboard mapping for 700+ Kafka connectors, achieving 0.11s repeat-load latency by caching connector mappings at the HTTP session layer.
- Improved reliability of a Kafka Streams payment notification pipeline by filtering malformed events, standardizing account-number normalization, and adding event-time mappings for downstream monitoring and observability.

PNC Bank

Aug 2025 – Jul 2026

Software Engineer Rotational Program

Dallas, TX

- Reduced render latency 96% (3.5s → 0.13s) for Angular tables displaying 48K+ records by migrating the rendering layer to AG Grid, eliminating UI freezes for end users during large dataset views.
- Built a .NET API endpoint integrating 40,000+ enterprise applications with their business capability metadata in MongoDB, giving leadership visibility into application capabilities to inform organizational and technology decisions.

PNC Bank

Jun 2024 – Aug 2024

Machine Learning Intern

Pittsburgh, PA

- Built a Python anomaly-detection tool using Isolation Forest to identify anomalous records in SOX compliance reports and reduce manual review.
- Vectorized Pandas preprocessing for datasets with 100K+ records, replacing row-wise transformations with reusable preprocessing functions.
- Presented anomaly-detection findings and model tradeoffs to senior leadership, comparing models using detection rates and validation metrics.

Projects

Apartment Copilot | React.js, FastAPI, SQLite

- Ranked 200+ apartment listings into personalized top-5 recommendations by combining scraped listing data with users' numeric and natural-language preferences.
- Developed a React frontend supporting typed and voice-based preference capture alongside numeric filters for price, bedrooms, and square footage, creating a unified personalization workflow.
- Designed a FastAPI backend that scraped listing data, combined structured and unstructured user preferences, and used an LLM API to generate percentage-based match scores and personalized ranking explanations.

Technical Skills

Languages: Java, Python, C#, SQL, JavaScript, TypeScript, C

Frameworks & Libraries: Spring Boot, Angular, React.js, FastAPI, ASP.NET Core, Node.js, Pandas

Technologies: Apache Kafka, Kafka Streams, Kubernetes, MongoDB, SQLite, AWS, Dynatrace, Git, CI/CD
