Education

Rutgers University

May 2025

Bachelor of Science in Computer Science & Cognitive Science (GPA: 3.67 / 4.00)

New Brunswick, NJ

- **Relevant Coursework:** Data Structures and Algorithms, Discrete Math I & II, Machine Learning Principles, Internet Technology (TCP/IP), Computer Architecture, Design & Analysis of Computer Algorithms, Operating Systems Design

Experience

PNC Bank

Aug 2025 – Present

Software Engineer Rotational Program

Dallas, TX

- Reduced render time from ~3.5s to ~0.13s (96% improvement) for tables with 48,000+ records by migrating to AG Grid.
- Delivered column sorting, multi-criteria filtering, and row-based navigation features in Angular, improving data accessibility for dashboards used by internal users.
- Increased visibility for 40,000+ applications by building a REST API endpoint in C#/.NET to integrate MongoDB business capability data.
- Maintained 80%+ unit test coverage across features and ensured code quality through SonarQube integration in CI/CD pipeline.

PNC Bank

June 2024 – Aug 2024

Machine Learning Intern

Pittsburgh, PA

- Reduced manual review time for SOX compliance reports by building an anomaly detection system using Python and unsupervised ML (Local Outlier Factor, Isolation Forest).
- Optimized data processing for high-volume datasets with 100k+ rows using Pandas for vectorized operations and creating preprocessing functions.
- Presented findings to senior leadership through an analytical Jupyter notebook documenting ML model comparisons, anomaly detection rates, and accuracy metrics.

Projects

Apartment Copilot | *React.js, FastAPI, SQLite*

- Designed a web app supporting real-time ranking of 200+ scraped listings with AI scoring.
- Designed and deployed a scalable RESTful API using FastAPI with de-duplication and polling.
- Engineered a lightweight data persistence layer using SQLite, enabling low-latency status updates as links were scraped and analyzed in real time.

Gym Crowd Tracker (HackRU 2022 Health Track winners) | *Python, Streamlit*

- Developed and deployed a real-time occupancy tracker to AWS within 24 hours, integrating Python backend + Streamlit frontend to process crowd-sourced data with dynamic updates.
- Implemented asynchronous data ingestion and caching layer to handle concurrent user submissions, improving real-time update reliability and scalability for 40+ concurrent users.

Technical Skills

Languages: Python, C#, Java, JavaScript, TypeScript, C

Technologies: Angular, ASP.NET, FastAPI, MongoDB, React.js, Node.js, Sci-kit learn, Flask

Concepts: RESTful APIs, Machine Learning, Git, CI/CD, Agile, Unit Testing
